Arrival Systems Signs Multi State Agreement with Kodak Dental Systems

Mobile, AL — Arrival Systems announced today that it has signed a multi state referral agreement with Kodak Dental Systems. The company will serve as a Certified Network Solution Provider (NSP) for dental offices who utilize Kodak’s award winning line of digital radiography systems, as well as their extensive line of dental practice management suites. As a Certified NSP, Arrival Systems will be responsible for the state of Alabama and the Florida Panhandle. As part of the agreement, the company will open satellite service offices in Pensacola, FL and Birmingham, AL .

“In the past, our customers have had to rely on technology partners based out of Atlanta or New Orleans,” said Chuck Fisk of Kodak Dental Systems. “Now they can receive expert service, from Kodak certified technicians, without waiting for someone to travel from out of state.”

“We are extremely pleased to have a company as prestigious as Kodak Dental Systems as a business partner.” said C.J. Ezell, President of Arrival Systems. “Only fifty five technology firms in the United States have earned the Kodak Certified NSP status. This agreement clearly displays Kodak’s confidence in our ability to deliver quality networking solutions to their clients.”

Arrival Systems, founded in 2002, designs and implements system/network solutions based on Microsoft technologies. Arrival Systems' mission is to provide quality products and services to small and medium sized businesses which not only solve their business problems, but also produce their desired results and add value to their business.

Kodak Dental Systems Group is a leading participant in infoimaging, a \$385 billion industry created by the convergence of image-and-information technology. The business, which includes wholly-owned subsidiaries PracticeWorks, Inc. and Trophy Radiologie, S.A., develops, manufactures and markets dental imaging and practice management systems for dental practitioners, including practice management software, intraoral and extraoral dental imaging films, processing chemistry and x-ray equipment; direct-digital dental x-ray technology; digital cameras and accessories for dental applications; photographic-quality paper for printing digital images; COOK-WAITE brand local anesthetics; and a variety of related products and services. Infoimaging unites three closely related imaging markets that enable people to more easily take and share images as information: devices, such as digital cameras and x-ray systems; infrastructure, such as practice management software; and services and media, such as photographic-quality inkjet paper and electronic insurance claims submission.
